

Ray Tracing Optimization

Kashofer, Radschek, Wagner

December 11, 2016

1 Profiling

2 Pipeline

3 Optimization

4 Future tasks

Rendering time

- original code: $45 \frac{\text{sec}}{\text{Frame}}$
- simple C-Code adaptations: $43 \frac{\text{sec}}{\text{Frame}}$
- replaced fix_mul16 by ci_mul looped functions: $36 \frac{\text{sec}}{\text{Frame}}$
- fix_mul16 calls ci_mul: $17 \frac{\text{sec}}{\text{Frame}}$

→ Transition looped functions from SW to HW to achieve target speed

Algorithm

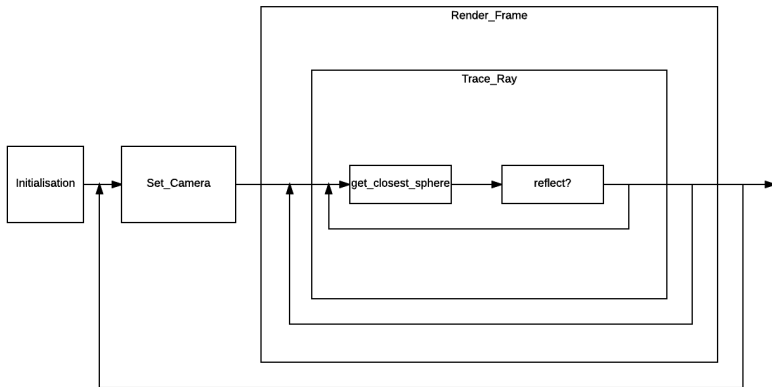

Figure: Schematic of the algorithm

Functions

- Initialisation: once in entire algorithm
- SetCamera: once every frame
- GetClosestSphere: up to REFLECT times per ray
- Reflect: up to REFLECT times per ray

Outline

Idea: automate entire frame-rendering
