

Ray Tracing Optimization

Kashofer, Radschek, Wagner

December 11, 2016

1 Profiling

2 Optimization

3 Future tasks

Rendering time

- original code: $45 \frac{\text{sec}}{\text{Frame}}$
- simple C-Code adaptations: $43 \frac{\text{sec}}{\text{Frame}}$
- replaced fix_mul16 by ci_mul looped functions: $36 \frac{\text{sec}}{\text{Frame}}$
- fix_mul16 calls ci_mul: $17 \frac{\text{sec}}{\text{Frame}}$

SW code structure

getClosestSphere is a main function and contains a lot of loops

→ Transition looped functions from SW to HW to achieve target speed

HW ressources

- xyz Logic cells
- abc M9Ks
- uvw DSPs

→ Plenty Logic-cells (registers and LUTs), keep number of DSPs and M9Ks low
